## Downloading From PortableApps.com

PortableApps provides a huge range of applications in portable form which can be used with your Access Tools menu. Unfortunately, AccessTools can not automate the installation of these applications, so the following instructions should be followed to ensure the correct installation of any PortableApps products.

Downloading Your Application

- If you have arrived at this document from the Access Tools Downloader, it is likely that you have already chosen the application that you want to download.

- A webpage will load in your default browser- this is the download site from PortableApps for your chosen application.

- Select the "Download" button on this website. (This may have a number such as 3.3.1 immediately after the word Download – this is just the version number of the application).

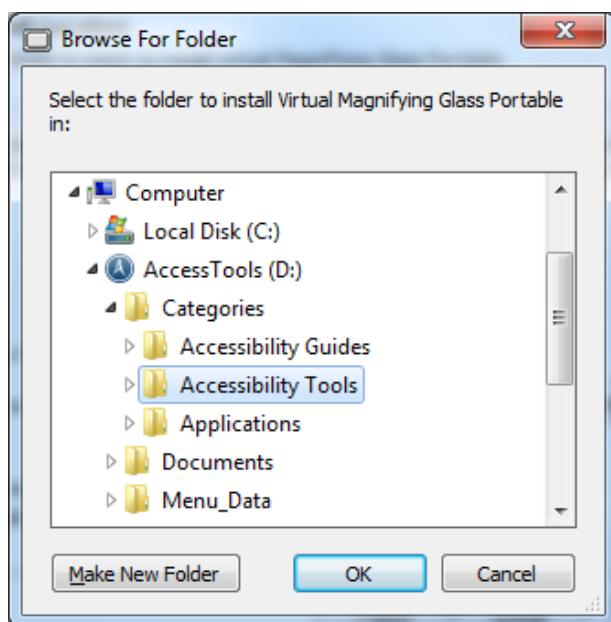

- You will be redirected to a new webpage. Depending on your web browser, the download may start immediately, if not select the "direct link" to begin downloading.

- You will now be asked whether you wish to Run or Save the download file. Select Save.

- Your browser will then ask you where you want to save the file. Choose a simple location, such as your desktop, and your download will begin.

Installing your application

- When the download has completed, locate the file in the location you chose. Launch this to begin the installation process. (You may receive a security warning here, as the file was downloaded from the Internet).

- Follow the steps in the installer until you reach the "Choose Install Location" box.

- Here, you need to ensure that you are installing to your AccessTools pendrive, and not the actual computer that you are using:

  o Select the "Browse…" button.

  o In the list that is now shown, locate "Computer". Expand this list item, by either click on the arrow to the left of it, or pressing the right arrow key when you have it selected.

  o Select the item labelled "Access Tools", and expand this item in the same way as before.

  o Select the "Categories" item, and expand this in the same way as before.

  o You can now choose whether you want your new application to appear in the menu as an "Accessibility Tool" or an "Application". Select the relevant choice, and then select the "OK" button.

- Select Install on the "Choose Install Location" box. The installation will commence.

- Select "Finish" when the installation has completed. Your new application is now ready to use, and will be shown on the menu the next time it is launched. You can now delete the downloaded installation file.
